SunWize Introduces New Generation of Flexible and Modular Grid-Tie Systems

***Pre-engineered SANYO, SOLON and Trina Solar Systems are
Now Available with the Enphase Energy Microinverter System***

Kingston, NY December 13, 2010 - [SunWize Technologies, Inc.](http://www.sunwize.com), the industry's premier provider of solar electric solutions, has incorporated the microinverter system from Enphase Energy into the new generation of its popular Grid-Tie System packages. These systems are available for immediate delivery from SunWize facilities in Kingston, NY, and Rancho Cucamonga, CA.

SunWize Grid-Tie System packages are complete, pre-engineered residential and small commercial solar solutions that come with permit-ready documentation and a comprehensive installation manual. These new generation Grid-Tie System packages feature the microinverter system from Enphase Energy and consist of modular building blocks that can be combined to create one or more branch circuits and a system of any size.

The new additions to the product line feature the SANYO A Series monocrystalline 215, Trina Solar TSM-PA05 polycrystalline 225 or SOLON polycrystalline Blue 225 combined with UNIRAC SolarMount™ racking, and either the M210 or M190 microinverter from Enphase Energy. The Enphase Energy Envoy communications gateway for remote system monitoring is available as an option.

“Traditionally, residential solar electric systems involve design, documentation, sourcing of individual components, receiving, staging and one-of-a-kind on-site installation. This approach is relatively complex, prone to error and time consuming,” said David Kulik, President and CEO at SunWize. “These new SunWize Grid-Tie System packages not only incorporate the popular microinverter system from Enphase Energy, but are also based on standard modules that enable maximum flexibility in system design.”

“They represent a simpler approach that saves solar installers substantial time and money. With the significant engineering and expertise SunWize has put into the product, installers can be confident they are providing customers with solar electric solutions of the highest quality and reliability.”
