SunWize Launches New Grid-Tie System Product Line Incorporating the SOLON Blue 220/01 Series

**Popular pre-engineered systems are now available with
German engineered, US manufactured 230 watt modules**

Kingston, NY May 6, 2010- SunWize Technologies, Inc., the industry's premier provider of solar electric solutions, has incorporated the new Solon Blue solar module into over 40 new configurations of its popular Grid-Tie System packages. These systems are available for immediate delivery from SunWize facilities in Kingston, NY and Rancho Cucamonga, CA.

SunWize Grid-Tie System packages are pre-engineered, complete residential and small commercial solar solutions that come with permit-ready documentation and a comprehensive installation manual. They are ordered with a single part number and can be shipped from stock, free of freight charges, direct to the installer's shop or customer jobsite. SunWize Grid-Tie Systems are available in a wide range of configurations. The new additions to the product line feature the polycrystalline SOLON Blue 220/01 230 W solar module combined with UNIRAC SolarMount™ racking (or without racking) and industry leading inverters from Fronius, SMA America and Schneider Electric (formerly Xantrex).

The new SunWize Grid-Tie Systems with the SOLON Blue 230 W modules provide solar installers high quality at an extremely competitive price point. The 230 watt SOLON Blue is a highly efficient polycrystalline solar module (module efficiency of 14.2%). It is ruggedly constructed, incorporating strong 4mm solar glass with a twin-wall frame for ultra high load capacity. With its proven German design and state of the art U.S. manufacturing, SOLON Corporation strives to deliver the highest quality and most reliable solar solutions on the market. The quality of the SOLON product is reflected by its unmatched 10-year workmanship and 25-year performance guarantee warranties.

“Traditionally, residential solar electric systems involve design, documentation, sourcing of individual components, receiving, staging and one-of-a-kind on-site installation. This approach is relatively complex, prone to error and time consuming,” explains David Kulik, President and CEO at SunWize. “SunWize Grid-Tie System packages are a simpler approach that saves installers of solar systems substantial time and money. Moreover, because of the significant engineering and expertise SunWize has embedded in the product, installers can be confident they are providing their customers with solar electric solutions of the highest quality and reliability.”
