SUNWIZE 2026

SunWize Power & Battery is the premier power equipment provider. We develop, design, and build resilient remote power systems. We also design and build electronic assemblies for integration into OEM products and field applications.

40 years of proven excellence

Custom-designed power systems

- Stand-alone off-grid

- Hybrid solar systems

- Power backup systems

Off-the-shelf control panels and solar systems

East and west coast manufacturing

Privately owned and operated

LOCATIONS

PRODUCTS & SERVICES

PRODUCTS

Off-grid autonomous power systems
Remote/outdoor battery UPS systems
Rugged solar mounts
Rugged enclosures
Hybrid power systems (Solar/Wind/Fuel Cell/Generator)
Components and sub-assemblies

SERVICES

Solar power system sizing and design
Hybrid power system design and analysis
Design for back-up power systems
Consulting engineering
Assembly and testing

[READ OUR CAPABILITY STATEMENT](#)

IN-HOUSE ASSEMBLY, QC, TESTING

All our system design, assembly, and QC testing are done in-house in our Oregon and Ohio facilities

This allows us to ensure that everything that we ship meets our demanding standards so that it is ready to be deployed in the field.

AUTOMATED PRODUCTION

Our state-of-the-art automated production capabilities include our wire-bending machine, which allows us to ensure consistency between all of the control panels we produce and saves time for our production team.

Additionally, we utilize pneumatic tools to ensure that all of our wire crimps and connections are secure.

AUTOMATED CAPABILITIES

- Wire bending
- Wire stripping
- Wire crimping

TYPES OF CUSTOM SYSTEMS

Custom designed by our team of experts to power your load when and where you need it

STAND ALONE SOLAR

Stand-alone solar systems are self-contained and use solar for power generation, and batteries for energy storage.

Great For

Sites with limited accessibility

Low-power devices

Areas with moderate to high winter solar resource

[LEARN MORE](#)

HYBRID SOLAR

Hybrid solar systems utilize solar power and a secondary charging source such as a generator, fuel cell, or wind turbine.

Great For

Sites with good accessibility

High-power devices

Areas with low winter solar resource

[LEARN MORE](#)

POWER BACK-UP

Power back-up systems are designed to be dependent on an external charging source, and to provide power when that power source is disconnected.

Great For

Preventing site down-time

Backing up critical equipment

Keeping communication equipment online

Turnkey Power Systems Ready to Ship

SunWize Power Ready Express (PRE) systems combine the benefits of a custom-designed system and the convenience of a ready-to-ship pre-designed product that comes with everything you need to power an off-grid load.

We design our PRE systems from the ground up, so you can be assured all the module cables, circuit breakers, and wire are sized properly for the included array and batteries, ensuring safety and product longevity.

Some of the other benefits of purchasing one of our PRE systems include easy-to-follow installation documentation, technical support, and a minimum 1-year manufacturer warranty on the major component in the system.

PRE systems include

- Solar modules
- Module cables
- Solar mount
- Equipment enclosure
- Wired control panel with charge controller
- Batteries

CONTROL PANELS

Example of a [Custom Designed Control Panel](#)

Custom or Pre-Built Control Panels

We carry a wide variety of predesigned and ready-to-ship control panels. These control panels come with a solar charge controller, breakers, wire, and open terminal blocks for connecting your load. These control panels make it easy to set up a power system.

The panels come pre-built on back plates designed to fit into our M, F, and T series of enclosures. some exclusions apply, give us a call or visit our website for more details.

If you don't see the exact control panel for your application, we can work with you to design and build a custom control panel to ensure you have exactly what you need.

SunWize also has a selection of accessory panels, with devices such as inverters, DC/DC Converters, and communication equipment. These accessory panels are specifically designed to be used with our control panels.

SUNWIZE SOLAR MODULES

SunWize solar modules are high-quality. The modules are designed and manufactured to provide the best combination of performance, price, size, and reliability.

SunWize has industrial solar modules ranging from 30W to 450W.

SunWize also offers solar modules with UL 61730 (fire rating) and C1D2 (hazardous location) certifications.

F-SERIES

Powder coated, pole mountable,
key-locking

[SHOP F SERIES](#)

SunWize Enclosures are designed to meet the needs of the off-grid industrial power market. We have several different lines of enclosures, from large ground-mounted cabinets to small pole-mounted enclosures.

There are multiple enclosures in each series, each is designed to accommodate a unique compliment of batteries.

Visit our website for a full list of the enclosures SunWize has to offer.

SUNWIZE SOLAR POLE MOUNTS

[1 Module SOP Mount](#)

Hold up to 410W of Solar

4" – 6" Pole **240002**

6" – 10" Pole **240007**

[2 Module SOP Mount](#)

Hold up to 800W of Solar

4" – 6" Pole **240003**

6" – 10" Pole **240008**

[3 Module SOP Mount](#)

Hold up to 1200W of Solar

6" – 10" Pole **240060**

[27" SOP Mount](#)

Hold up to 65W of Solar

2" – 4" Pole - **007985**

The SunWize Side of Pole mounts are durable mounts designed to hold arrays ranging from 50W to 1200W.

Our mounts feature our patented Easy-mount[®] Bracket, and are wind-rated up to 140 MPH, and snow load rated up to 60PSF.

Wind and snow ratings are based off array angle, and array size. Contact us for more details.

Visit our website for a full list of all the solar mounting options.

SUNWIZE GROUND MOUNTS

SunWize offers a series of ground mounts that are designed to be easy to deploy and easy to move.

240010 & 240005 are skids made from aluminum parts that are bolted together. This makes the mount lightweight, and easy to disassemble and move.

250160 is a solid galvanized steel skid. The skid is still easy for two people to lift but offers more rigidity and requires less ballast than the aluminum skid. The steel skid is designed to be used with either the [M2-8D](#) or [T4x8D](#) enclosure.

96" Aluminum Skid - [240010](#)
(Shown with [260019](#) M2-8D Enclosure)

Hold up to 750W of Solar

Compatible with many SunWize Enclosures

(Shown with [260019](#) M2-8D Enclosure & [240037](#) 96" RGM)

Hold up to 500W of Solar

Compatible with T4x8D and M2-8D Enclosures

[LEARN MORE](#)

SUNWIZE POWER STATION MOUNTS

Shown with (2) T4x8D Enclosures

Shown with (1) WF4 Enclosure

Shown with (2) T8x8D Enclosures and (1) M2-8D Enclosure

The SunWize Power Station is a large, ground-mounted solar mounting structure.

The Power Station can be used as a self-contained system or as part of a larger system. There is space to mount battery enclosures, control enclosures, and combiner boxes, making assembly easy.

The SunWize Power Station mounts have a wind rating of 120MPH and a snow load rating of 50PSF (Exposure "C" @ 45°)

These mounts require far less ground penetration than a comparably sized top-of-pole mount, making them perfect for areas where digging is difficult or impractical because of soil conditions.

CASE STUDY

DOT Telecom Site

Array Size – 35,520 W

Battery Capacity – 5860Ah

System Voltage – 48V

System Type – Hybrid

Solar Mount – Power Station Mount

Enclosures – 260002 Control Enclosure

Batteries – DEKA 2V Unigy II Interlocking Batteries

A state Department of Transportation required several large hybrid systems for a closed-loop communication network for emergency services and civil defense networks. The systems utilized multiple metal array support structures from the SunWize Power Station line of products. The installation includes an Outback Radian GS8048A-01 Inverter Charger, 100A-rated MPPT solar charge controllers, and pre-assembled power control panels. The systems were commissioned in 2020. The installation was done by Radco.

CASE STUDY

California Utility

Array Size – 130 W

Battery Capacity – 108Ah

System Voltage – 12V

System Type – Stand-Alone Solar

Solar Mount – 27.5" SOP Mount

Enclosures – 004154 F1 Enclosure

Solar Controller – SunSaver 20A

A major utility company from Southern California contacted us because they needed to install some sensitive monitoring equipment on power poles. While the adjacent power lines carry 12,000VAC power, their device requires just 12VDC.

"Solar also allows me to install the sensor without touching the primary (12,000 volt) wires and adding equipment that might cause a huge wildfire. Adding 12,000-volt components (small power transformer, fuse, fuse cutout, lightning arrestor, jumpers) adds to our risk very slightly but the solar at 12v is pretty much fireproof."
